Mr. Ranidu,

Develop a web application to manage the business and manage all the financial transactions

We are company which give wedding dresses for rent. We want an application to manage day to day works in our business. Some basic major functionalities we need through the system are,

1. Functionality to manage all our transactions
2. Inventory management system
3. Customer Relations management system
4. Need to have functionality to manage our branches also
5. Need to have functionality to generate several reports

-and more. We hope you will build a good application for fulfilling our requirements. And we can discuss all other requirements through online call.
